

NP30 NETWORK PLAYER

Enjoy music from stream, hard drive and disc. All you do is choose.

LUXURY LINK TO A NEW WORLD OF MUSIC

Think of the NP30 Network Player as a high fidelity bridge to a world of music on your computer, smartphone and favourite online sources. It adapts any high quality music system for audiophile streaming, internet radio and gapless audio playback, through integration with PCs Macs and hard drives, iPod®, iPad®, iPhone® or USB thumb drive. The NP30 isn't a source like a CD player, but with so much music now available from digital files stored on tablet, phone and computer, its performance is as critical to the sound of your system as any traditional source component.

Life with the NP30

The NP30 represents a new breed of hi-fi separates requiring the specialized expertise and craftsmanship of a leading hi-fi designer like Primare. If you're a music fan who enjoys access to digital music from a range of sources and at high audio resolution, the NP30 will ensure the best sound quality possible through your home hi-fi system. It's a genuine 24 bit/192kHz Digital-to-Analogue Converter (DAC), which transforms binary data into waves of the purest sound.

Because the NP30 throws your choice of music wide open, you'll also need excellent ease-of-control - another Primare priority. Use the proprietary Primare App on your tablet or phone to view and play all your networked shared content, including online streams from Internet radio and your favourite music sites. The Primare App will display playlists and, if you're interested, the format details of the song in play. You can

fast forward or back through the selection and change volume; select the sources connected to the NP30, rename your network and manage software upgrades - all from your mobile device.

Experience Primare through the NP30

Your favourite music deserves fidelity whether it's stored as data on a CD, or streamed from local NAS or online players. And since the rules of high performance remain the same, we've built the NP30 with the care we apply to every Primare design. When you invest in the NP30 Network Player, you're buying decades of award-winning design expertise, dedicated to reducing noise and distortion so only the music shines through.

Consistent with Primare philosophy, the NP30 incorporates multiple individual power supplies - six for the analogue and three for the digital sections - so that optimum levels of clean power reach the

sensitive signal processing parts of the design. To further protect the purity of the sound, digital and analogue signal paths have their own dedicated ground planes to remove any possibility of electrical noise. We make sure that music signals reach the NP30's fully balanced audiophile output stage in the best condition for high quality reproduction - even the input switching is noise-free via a sophisticated audiophile mute circuit. In the NP30, as with all our designs, Primare offers you a complete luxury listening experience.

And we've thought of your convenience as well. The NP30 has a volume control which allows for direct connection to a power amp or active loudspeakers, so all you need for a compact, super-smart high fidelity system is the NP30, amplification and speakers. Connect any network attached music source through a wide range of inputs, including a specialized 24/192 USB interface, which ensures that the highest resolution files arrive without a hitch and in perfect quality. Easy integration with home automation systems is made through IR- and TRIG outputs.

With the NP30 Network Player you'll enjoy high fidelity access to a new dimension in musical appreciation. You're free to choose and explore the limitless possibilities presented by a low noise, wide bandwidth gateway, beautifully designed in the classic Primare style, easy to use and integrate with existing systems and built to provide the finest quality music for years to come.

NP30 Features and Specifications

Audioformats	WAV, AIFF, FLAC, MP3, AAC, WMA, OGG, ALAC
Volume Control	Yes, from both C24 as well as Primare App
Sample rates	32-192kHz
WLAN	b, g, n mode; WEP (64 and 128Bit), WPA & WPA2 (TKIP & AES)
Connections output	XLR, RCA, Digital (192 kHz), IRout, TRIGout
Connections input	3x optical, 1x spdif, USB-A, USB-B, WLAN, LAN, RS232
Weight	8.5 kg
Dimensions	430 x 370 x 95 mm
Power consumption	Max 20W
Standby	0.5W
Output impedance	RCA 100 Ohm; XLR 110 Ohm
XLR/RCA output	Both 2.2V
Signal to Noise	120dB
Color	Black, Titanium
